

Golden Ogbeka

Software Engineer

Lagos, Nigeria

Work experience

Frontend Engineer at Alerzo Limited

October 2022 till date

We create business management tools for organizations to manage orders, inventory, customers and processes

- I work on implementing required features for [Veedez](#) application which is a business solution for managing customer operations
- I implement business required features on internal admin applications for [Alerzoshop](#) and [Veedez](#)
- I manage the frontend web team that maintains the internal admin application for [Veedez](#)

Technology stack: React JS, Material UI, Styled components, Typescript

Fullstack Developer at Keyla Technologies

October 2021 – October 2022

We created a subsidiary company for food and beverage distribution and called it Cravings Limited.

- I built the web application for Cravings Limited and it enabled users place orders to restaurants and food vendors and also process payments
- I built the internal admin dashboard for Cravings Limited to manage customer, order, vendor and logistics operations
- I built the branded website for Cravings Logistics which was to serve as the Logistics provider for the food and beverages business
- I also worked with a team to build a full food delivery application for the company's client and I functioned on both backend and frontend teams
- Cravings Limited was shut down at the end of 2022 because the food and beverages distribution business didn't reap good returns as expected

Technology stack: React JS, Ant Design, Framer Motion, Typescript, Socket IO, Node JS, PostgreSQL, Express JS

Fullstack Developer at Composite Property Development

February 2021 – December 2021

- We created a crowdfunding application for real estate structures. The emphasis was to give people an investment opportunity in

Management, Team

buildings and structures during the building phase so at completion, they can reap dividends from either the sale of those structures or from the rent obtained

- I also built an internal staff management portal with PHP that managed staff and admin processes
- I designed a new version for the company website as well as a portfolio book for the company's real estate products

Technology stack: React JS and PHP

Founder and Full Stack Engineer at The Chicken Universe

October 2019 – January 2021

I founded this company in an effort to bridge the gap between sellers of chicken products and their customers. In doing this, I created an application called [The Chicken Universe](#)

- I built the entire backend infrastructure using Node JS, MongoDB, Express JS and Socket IO for monitoring user online activity
- I initially built the frontend application using EJS but later in 2020, I rebuilt the user facing aspects of the application with React JS
- I built the [mobile app](#) for the user mobile and hosted in on Amazon App Store

Technology stack: Node JS, Mongo DB, Express JS, EJS, React JS and React Native

Additional Projects Built

[Konegtor](#)

2023

This is an app to connect artisans to their customers around Nigeria and also help manage appointments and communication between artisans and their customers.

I built this with Next JS, Redux Toolkit, Socket IO, Tailwind CSS and Typescript

[Switch Mobile App](#)

2022

This is a financial application for managing funds and sending money between Nigeria and other countries. A product of Sterling Bank PLC. I worked with a team of React Native developers to build features like Airline Booking, DOM account transfers, I-Invest and Virtual Cards

This is built with React Native and Redux Saga

[TFH Church App](#)

2022

This is the official mobile app for The Father's House Church, Nigeria. This was built to connect the church's activities to the congregation.
