Golden Ogbeka

Software Engineer
Lagos, Nigeria

Work experience

Frontend Engineer at Alerzo Limited

October 2022 till date

We create business management tools for organizations to manage orders, inventory, customers and processes

- I work on implementing required features for [Veedez](#) application which is a business solution for managing customer operations
- I implement business required features on internal admin applications for [Alerzoshop](#) and [Veedez](#)
- I manage the frontend web team that maintains the internal admin application for [Veedez](#)

Technology stack: React JS, Material UI, Styled components, Typescript

Mobile Engineer at Sterling Bank PLC

February 2022 – June 2023

Worked on the mobile team that built [Switch](#) mobile app. It is an application to enable cross border payments and transactions.

- Worked on Trips integration that allowed users book flights from the application
- Worked on app features like transaction limit enhancement, Identity verification, Netcore push notification deep linking, I-Invent integration, Virtual Cards, Account statements, Linked Accounts, DOM Account transfer, etc.

Technology stack: React Native, Redux Saga

Fullstack Developer at Composite Property Development

February 2021 – December 2021

- We created a crowdfunding application for real estate structures. The emphasis was to give people an investment opportunity in buildings and structures during the building phase so at completion, they can reap dividends from either the sale of those structures or from the rent obtained
- I also built an internal staff management portal with PHP that managed staff and admin processes

- [Diploma in Leadership Development](#)

Tech Stack

React, React Native, Typescript, Tailwind CSS, Node JS, Mongo DB, MySQL, Vue JS

Skills

Frontend Engineering, Project Management, Team Leadership, Media Engineering, User Interface Design, Cloud Infrastructure Management, Mobile Development, Backend Development

- I designed a new version for the company website as well as a portfolio book for the company's real estate products

Technology stack: React JS and PHP

Founder and Full Stack Engineer at The Chicken Universe

October 2019 – January 2021

I founded this company in an effort to bridge the gap between sellers of chicken products and their customers. In doing this, I created an application called [The Chicken Universe](#)

- I built the entire backend infrastructure using Node JS, MongoDB, Express JS and Socket IO for monitoring user online activity
- I initially built the frontend application using EJS but later in 2020, I rebuilt the user facing aspects of the application with React JS
- I built the [mobile app](#) for the user mobile and hosted in on Amazon App Store

Technology stack: Node JS, Mongo DB, Express JS, EJS, React JS and React Native

Supply Base Manager at KFC Nigeria

August 2018 – October 2028

In order to build The Chicken Universe is 2019, I needed to understand how the restaurant chain and poultry industries function in order to build a solution that would be beneficial to them.
My time at KFC taught me how restaurant chains function, how to build businesses, how to manage staff and how to sustain a business beyond 100 years.

Additional Projects Built

Koneqtor

2023

This is an app to connect artisans to their customers around Nigeria and also help manage appointments and communication between artisans and their customers.
I built this with Next JS, Redux Toolkit, Socket IO, Tailwind CSS and Typescript

Switch Mobile App

2022

This is a financial application for managing funds and sending money between Nigeria and other countries. A product of Sterling Bank PLC. I worked with a team of React Native developers to build features like Airline Booking, DOM account transfers, I-Invest, Virtual Cards, etc.
This is built with React Native and Redux Saga

Summer, 2011

Education

B.Sc. Computer Science - First Class
[Covenant University](#)
2014 – 2018

TFH Church App

2022

This is the official mobile app for The Father's House Church, Nigeria. This was built to connect the church's activities to the congregation.
I built this with React Native, Typescript and Redux Toolkit. I also built the backend for this with Node JS and MySQL (using Sequelize)

Keyla Technologies' Website

2022

I rebuilt the official website for Keyla Technologies using Gatsby.js and GSAP
